

RAIN BARRELS

RECYCLED RAIN BARRELS

Save on water bills

Keep your gardens watered and thriving

Reduce the stress on water systems during dry summer periods

Residential irrigation can account for almost 60% of all domestic water consumption. A 55 gallon rain barrel can fill in as little as a ¼ inch of rainfall.

These barrels are recycled from Food Grade High Density polyethylene barrels that were previously used to import food products. They are cleaned and rinsed with pH neutral products and then fitted with fittings and screens. Shapes and sizes depend on availability at the time of the order.

\$70 per barrel
